**DIRECTIONS**

1. Replace the original cloth filter bag with disposable **ezPOOLBag**.

2. Place the automatic pool cleaner in the pool and let it run until the bag is full. On average the **ezPOOLBag** can be used for up to 3 cleaning cycles depending on the debris in the pool.

   *Tip: When you notice that your robotic pool cleaner slows down and stops climbing the walls, it is time to replace the filter bag.*

3. When full, remove the used **ezPOOLBag** and install a new one.
