SIZE CHART:

For 94” to 102” Spas
(239cm to 259cm)

For 81” to 93” Spas
(206cm to 236cm)

For 68” to 80” Spas
(173cm to 203cm)

In extensive testing at the National Pool Industry Reasearch Center at California Polytechnic University, San Louis Obispo, this technology proved a daily heat benefit to test pools of 1,070 BTUs per square foot. (39,760 Heat Joules per square meter)

See our website: www.solarsunrings.com for full details.
Solar Spa Cover™

The Solar Spa Cover is a passive solar spa heating device made from two sheets of heavyweight U.V. resistant vinyl. The upper clear layer focuses sunlight on the translucent blue colored lower layer. The blue layer absorbs about 50% of the sunlight and converts it to heat. The balance of the sunlight is allowed to pass through for deep water heating.

The Solar Spa Cover uses the same proven technology as Solar Sun Rings adapted to the special needs of spas. These spas have much higher water temperatures combined with greater water velocity and turbulence. Spas without covers loose much of their costly heat overnight and regain very little during the day.

At night the contained air acts as an insulating blanket to retain heat gained during daylight. The contained air will also retain a great amount of heat supplied by your heater. Your spa will loose less temperature overnight and will heat up quicker, saving you money.

Solar Spa Covers are equipped with 6 magnets to improve clarity and decrease hardness of the water in your spa.

Solar Spa Covers may be used on all chlorine or salt water system spas whether in ground or above ground.

UNIQUE PATENTED DESIGN

Our unique patented design solves these endemic spa problems. We have combined maximum solar heating with our greatest practical encapsulated air thermal barrier. We have built the necessary rigidity in the rings to withstand the turbulence caused by high flow water jets.

REDUCES WATER LOSS

The high temperatures of spas promote rapid evaporation of water that in turn also causes rapid cooling of your spa. The patented design of the Solar Spa Cover reduces evaporation saving you water and heat.

REDUCES CHEMICALS

The two layers of heavyweight vinyl also prevent much of the evaporation of your spa chemicals. When used consistently you will save on costly spa chemicals.

KEEP YOUR SPA HEALTHY

Your spa requires some direct sunlight and uncovered time to stay healthy. The light weight and ease of removal and installation of the Solar Spa Cover make uncovering your spa easy and convenient.

EASILY CLEANED

After removal from the spa your Solar Spa Cover can easily be cleaned with a sponge and mild detergent solution.
